MY COMMITMENT TO SUPPLY CHAIN

Leadership & Vision

- Supply Chain will play an important role in any future model, however we will need to transform processes and enhance bench talent to be prepared for the anticipated change
- Develop national collaborative organizations that could bring together a large contingency of Supply Chain professionals to drive improvement throughout the Supply Chain.
- Effectively engage Supply Chain in local and national forums to influence policy and ensure that safe, effective patient care remains the goal.
- Develop programs to support local chapters that are on the brink of discontinuing the chapter due to low funding and/or participation.
- Continuous learning, mentoring and sharing the opportunity for growth of our new and young Supply Chain teams. The future of the healthcare Supply Chain will require speed to implementation of new models to keep up with the changes in how patients receive their healthcare services.
